Extraction

Armored RNA

(modified recombinant
MS2 phage particles)

Armored RNA for avian influenza virus

Universal IC

Eurasian control

American control

EGFP gene fragment

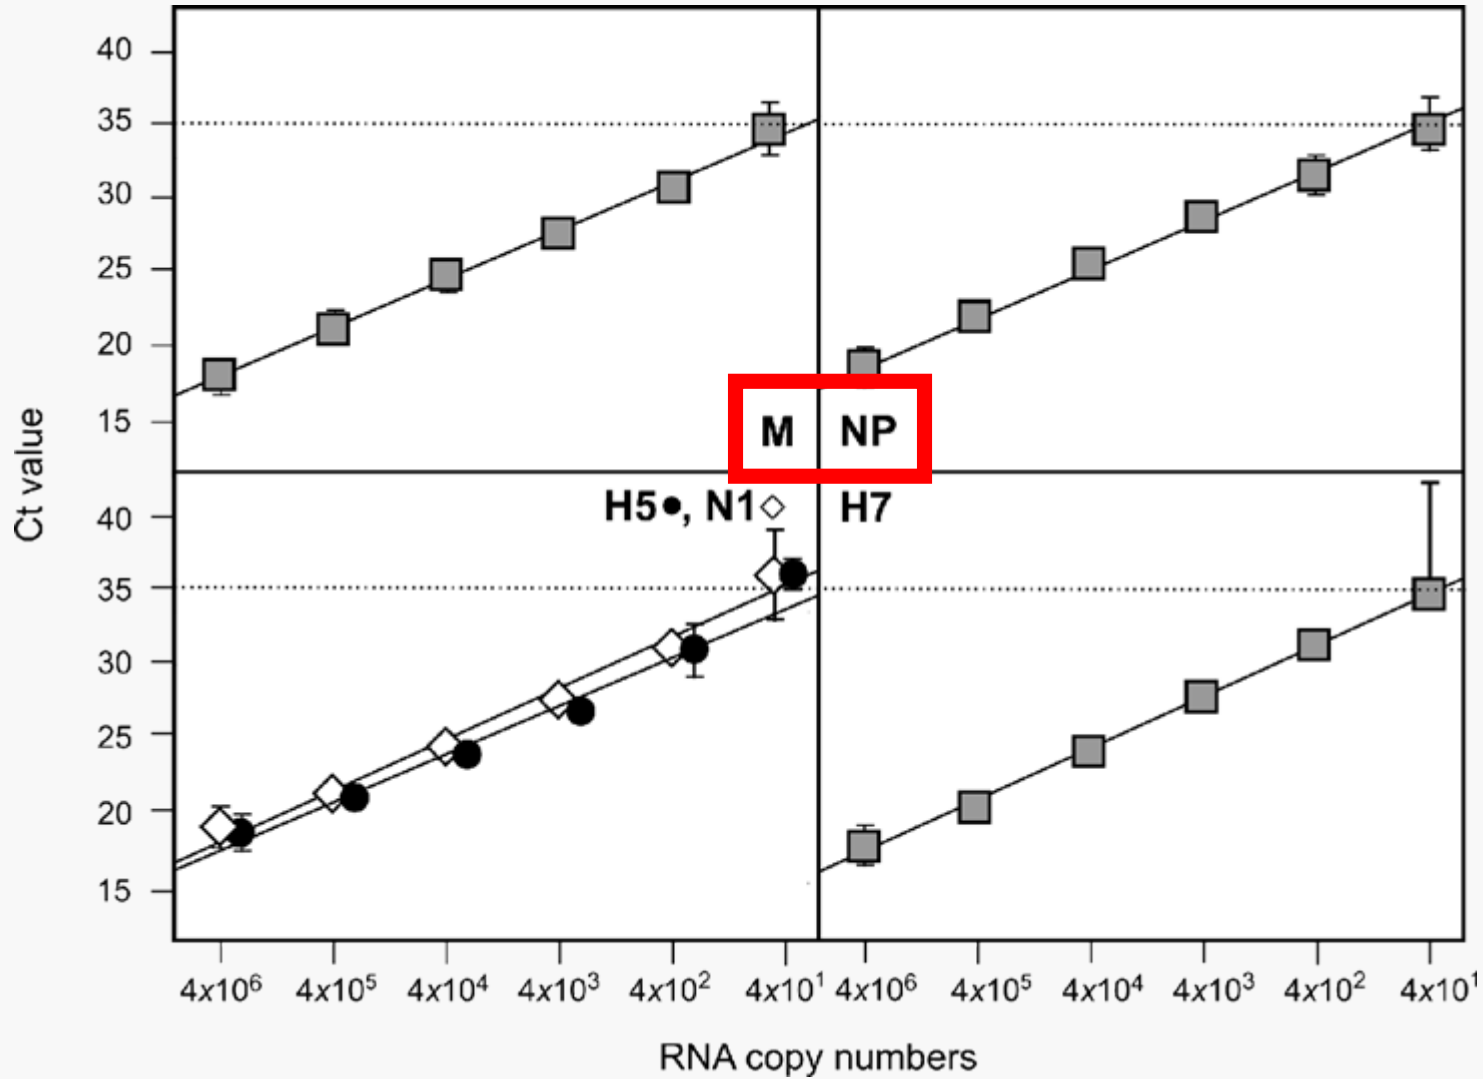

EU

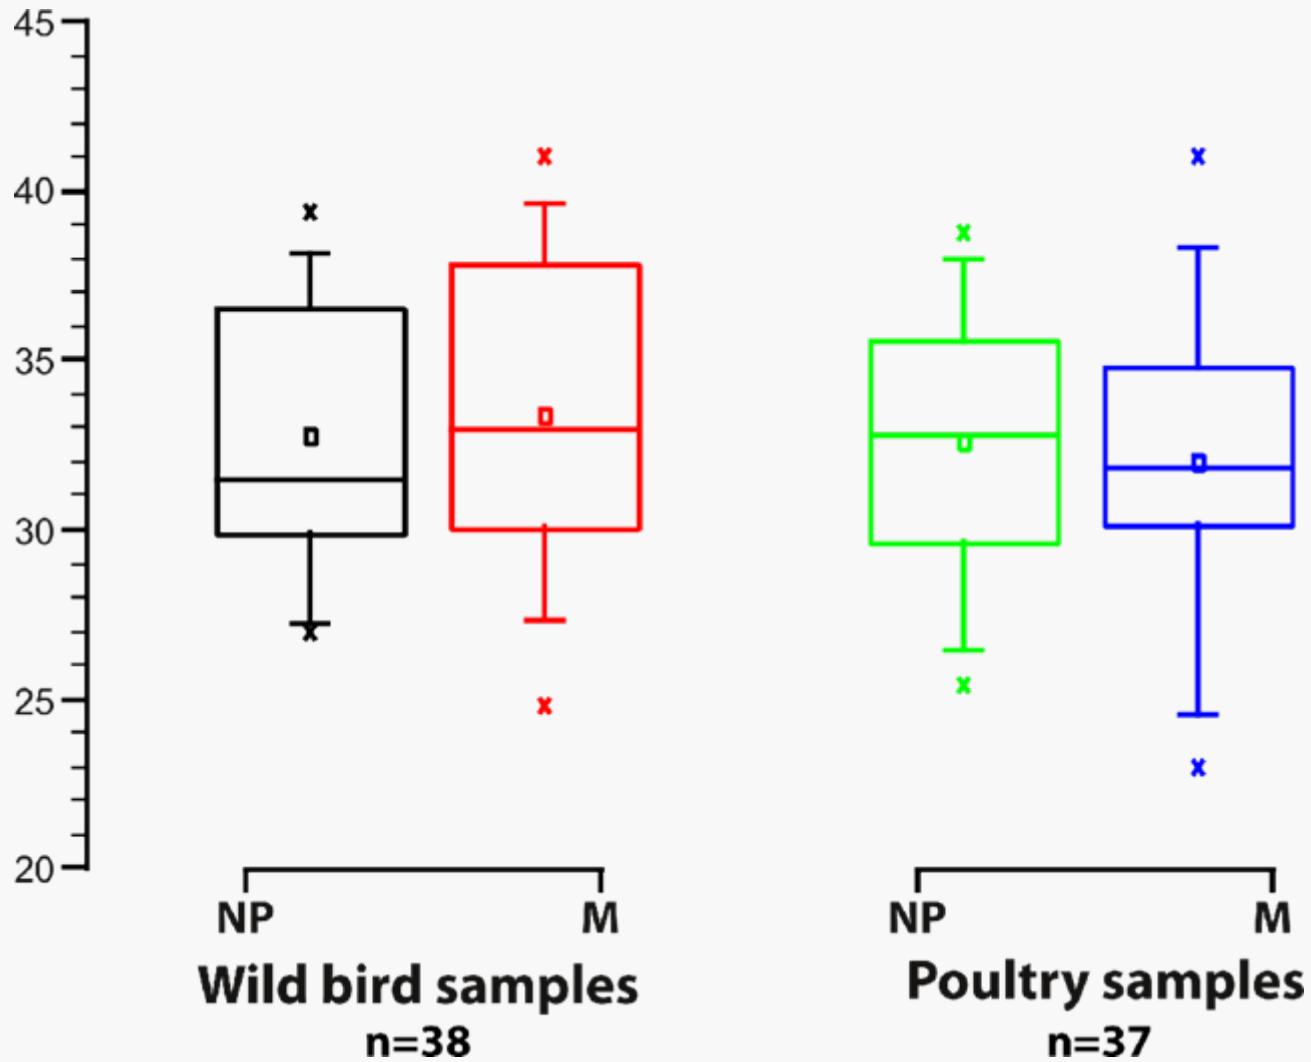

New

Eurasian control – run-off RNA

Features of the new „universal“ NP rRT-PCR

Features of the new „universal“ NP rRT-PCR

	Kappa	Range	Weighted	Criterion
WB	0,91	0,818-1,009	0,89	very good

US

“Production” of recombinant MS2 phages failed so far

In vitro transcribed RNA ready for distribution to OFFLU reference labs (ring trial)

Open for continuing curation and adaptation to changing primer/probe/target recommendations

On-site, subtype-specific serology

- Recombinant, baculovirus-expressed, *in vivo* biotinylated antigen (H5, H7, H9, NP)
- Macrochip reaction system
- Competition ELISA format
- DAS ELISA format

Reverse genetics group (Juergen Stech)

Recombinant vaccines group (Jutta Veits)

Pathogenicity group (Martin Beer)

**Surveillance/epidemiology/data base group
(Christoph Staubach, Timm Harder)**

**Genome sequencing group (Elke Starick,
Dirk Hoeper)**

Thanks,
and best regards from the island!
