

OIE LABORATORY TWINNING ON AVIAN INFLUENZA

2008-2009

IZSVe – FGI ARRIAH

Paris

15 September 2009

Victor N. Irza

Federal Governmental Institution Federal Center for Animal Health (FGI ARRIAH)
National Reference Laboratory for Avian Influenza

- **First OIE Twinning project**
- **Pre-Twinning visit**
- **Twinning guidelines**

LENGTH OF PROJECT: 12 MONTHS

DATE START: 1 st FEBRUARY 2008

DATE END: 31 st JANUARY 2009*

*** Postponed to 31 st JULY 2009**

MAIN OBJECTIVE:

upgrading of diagnostic capabilities in AI and ND of Candidate

Laboratory to a level comparable to OIE RL standards

PARTICIPANTS

Parent Laboratory:

IZSVe

**Istituto Zooprofilattico Sperimentale delle Venezie,
OIE/FAO RL for AI and ND**

Candidate Laboratory:

FGI-ARRIAH

**Russian Federal Centre for Animal Health
OIE RL for FMD**

Pre-Twinning collaboration

- January-February 2007. IZS^{Ve} mission with an OIE mandate to FGI ARRIAH to assess capabilities in AI and ND diagnosis and develop an upgrading programme
- March 2007. FGI ARRIAH delegation visited IZS^{Ve} and its section in Verona to look in situ how to upgrade
- Pre-Twinning missions – a base for success
- A basis for the plan for the twinning project

Recommendations and their implementation:

- Necessity to have all reagents, equipment, standard procedures for screening and identification AI and ND viruses.
- Training, network and exchange
- Necessity to upgrade virology unit or to build a new one
- Participation in International ring trials
- Internal controls, standardization, validation
- We made all SOPs for all procedure
- All serologic reactions were harmonized and standartized by printed and officially approved SOP`s
- Necessity to improve the system of sample management

Description of project phases

- **1st training period: classical virological techniques – 2 FGI-ARRIAH staff members – April –May 2008 (4 weeks)**
- **In loco mission – September 2008**
- **2nd training period: molecular techniques - 2 FGI-ARRIAH staff members – October 2008 (4 weeks)**
- **In loco mission – March 2009**
- **Ring trial**

Welcome
to IZSve!

Important

25th April and 1st May are public holidays in Italy

.....
.....
.....
.....

Weekly meetings with tutors/staff/participants to evaluate progress of training

Twinning: find a twin at each level

- **Exchange of information at each level**
- **Tutoring: to facilitate this process**
- **Build cross sectional relations**
- **Identification of main topics on molecular and classical diagnostic procedures (“short term projects”)**

- **PROJECT 1**
- **SCREENING OF FIELD SERA FROM AVIAN SPECIES**
- **DIFFERENT FROM CHICKENS AND TURKEYS**

- **AIM = IDENTIFICATION OF POSITIVE SAMPLES TO AI (NOT H5/H7)**

- **METHODS = ELISA TEST AGAINST THE NP**

- **IF POSITIVE AGID AND HI**

- **PROJECT 2**
- **COMPARISON OF CHEMICAL AND PHYSICAL FACTORS**
- **IN PREVENTING CROSS REACTION IN SERUM SAMPLES**
- **METHODS = USE OF TEMPERATURE, RDE AND**
- **KAOLIN TO ASSESS**
- **THEIR ACTIVITY**

- **PROJECT 3**
- **TO EVALUATE THE STABILITY OF PRE TREATED SERA**
- **BY CHEMICAL AGENTS**
- **METHOD= HI (LOSS OF TITER)**

Virological techniques

CHARACTERISATION OF ATYPICAL AI STRAINS

PURIFICATION OF AI ISOLATES

EVALUATION OF PATHOGENICITY BY IVPI

ISOLATION OF AVIAN VIRUSES ON CEL

**EVALUATION OF AI INACTIVATION DURING THE
NI TEST**

Short term projects- Molecular diagnosis

- **Extraction/Isolation of viral RNA**
 - Protocols
 - Isolates
- **Conventional and Real-Time PCR**
 - One step procedure
 - Two step procedure
- **Sequencing and phylogeny**
 - Alignment
 - Comparison

Ring Trial between IZSVe and FGI-Arriah: to harmonize diagnostic procedures

Serology- Virology

- Virus isolation
- Virus characterization
- IVPI

Molecular diagnosis

- RNA isolation
- PCR
- Sequencing

Sensitivity
Specificity
Reproducibility

Teleconference

- 1 - Second mission to FGI-ARRIAH: aims, personnel involved, report**
- 2 - Ring trials: molecular and classical techniques**
- 3 – Virus shipment from FGI-ARRIAH to IZSVe – problems encountered and options for solving**
- 4 - Quality system upgrading at FGI-ARRIAH: IZSVe proposals on how to proceed on that objective**
- 5 - Final workshop**
- 6 – Final report**

Activities by “distance sharing.....”

Shipment of H7 viruses (HP and LP) to FGI–ARRIAH

Shipment of a complete panel of antigens and antisera

Shipment of H5N1 HPAI viruses to IZSVe

Sharing of protocols

Sharing of information on equipments

Sharing of expertise

Dissemination.....

oie **izsv^e** Istituto Zooprofilattico Sperimentale della Venezia 

**OIE Twinning Project 2008
for Avian Influenza**
Legnaro (Italy) - Vladimir (Russian Federation)

Twinning - an integral concept to capacity building for the improvement of veterinary service

Twinning between the laboratories of IZSVe (OIE/FAO and National Reference Laboratory for Avian Influenza and Newcastle Disease) - Italy and FGI-ARRIAH - Russian Federation to strengthen and sharing expertise and experience on Avian Influenza managing and control.

**Международное Эпизоотическое Бюро (ОИЕ)
Птичий Грипп Проект Партнёрства 2008**
Леньяро (Италия) – Владимир (Российская Федерация)

Партнёрства - это понятие, которое является неотъемлемой частью расширения способностей по улучшению ветеринарного обслуживания

Партнёрства между лабораториями IZSVe (Национальная Референс Лаборатория Птичьего гриппа и болезни Ньюкасла) - Италия и ФГУ (Федеральный Центр охраны здоровья животных) - Российская Федерация для укрепления и обмена оперативным опытом и мнениями для управления и контроля над Птичим Гриппом.

Website Booklet Generation of the “Tips & Tools” document Final workshop

The screenshot shows the website of the Istituto Zooprofilattico Sperimentale delle Venezie (IZSV). The header features the IZSV logo and the text "Istituto Zooprofilattico Sperimentale delle Venezie". A navigation menu includes "Home", "Chi siamo", "Struttura", "Carta dei servizi", "Aree tematiche", "Utilità", "Contatti", and "English". The breadcrumb trail reads "English » Reference laboratories » Avian Influenza and Newcastle Disease » OIE Twinning projects". The date "giovedì 18 giugno 2009" is displayed in the top right.

The main content area is titled "OIE Twinning projects" and includes a sub-section "TWINNING PROJECTS OIE". It features a photograph of a group of people in a laboratory setting. The text explains that twinning projects aim at creating and supporting exchange of knowledge and partnerships, ideas and experience between two parties, namely the OIE Reference Centre and a Candidate laboratory. It states that twinning projects have been chosen by the OIE as a means for upgrading the quality and expertise of a laboratory in the so called *developing and in transition countries* and are part of the wider OIE initiative to improve the capacity of veterinary services.

The section "The concept" discusses the rapid spread and wide occurrence of animal diseases, such as highly pathogenic avian influenza (HPAI), bluetongue and foot and mouth disease, which has highlighted the need for a global approach. It notes that with the current level of global movements and trade of live animals and animal products, the outbreak of infectious diseases in a certain area could have effects on a global level. It emphasizes that an effective control of infectious diseases depends on the possibility to achieve an early diagnosis, which is only possible if expertise centres and laboratory apply standardised procedures and tests, as the OIE Reference Laboratories. It concludes that at present the expertise and diagnostic capacity provided by the OIE Reference Centres is located mainly in Europe and developed countries. Therefore, the OIE promotes the extensions of the veterinary services and the network of laboratories to other areas which might lack the expertise and diagnostic capacity.

On the right side of the page, there are links for "Login Register" and a "Link" section listing "FAO", "OIE", "OFFLU", "Fluaid", "Promed", and "ECDC".

In loco missions – to assess the successful transfer of knowledge and skills

- **Registration and documentation system**
- **Procedures**
- **Protocols: RNA isolation, PCR, gel detection, sequencing**
- **Quality assurance system**
- **Procedure validation**
- **Safety**

Virus research unit for AI and NDV

The laboratory consists in four rooms. In the first one, disinfection chamber and lock-chamber are present. In the second room, one freezer (-70C), one refrigerator (+4C) and a centrifuge are situated.

Virus research unit for AI and NDV

- A safety cabinet (BSL 2) for museum AIV and NDV isolates
- A data recording system with a central database and identification of samples based on bar codes

System of registration PBA (PACS Black&Witch, Canada)

Virus research unit for AI and NDV

- There are two other rooms where virus isolation and other virological works are carried out. One is equipped with two biosafety cabinets for post-mortem examinations, samples preparation and eggs inoculation.

Virus research unit for AI and NDV

- Incubator for eggs, water bath, centrifuge for samples clarification, etc.

Virus research unit for AI and NDV

- The second virologic room equipped with biosafety cabinet and CO₂-incubator for MDCK-cells cultivation, centrifuge and refrigerator.

New animal facility was built

- 2 big rooms, BSL-3 level
- 22 isolators for trials with birds
- 4 isolators for multi purpose goals.
- Modern system of air filtration&canalization
- Up to now, more than 30 challenge experiments had been carried out

Virus research unit for AI and NDV (animal facilities unit)

Virus research unit for AI and NDV

AI V and NDV isolates were tested for pathogenicity for susceptible animals (chickens, wild and domestic ducks of different ages)

Virus research unit for AI and NDV

- Written forms (SOP) standardized in accordance to OIE recommendations for all diagnostic procedures

National Reference Laboratory for AI and ND

HI (H5 subtype AIV) and AGID test kits production for a wide use in veterinary practice

Final comment

- **The IZSVe- ARRIAH Twinning project has been a success, and main objectives of the project have been fulfilled**
- **It can be an example and a roadmap for future twinning projects funded by OIE and other international organisations**

National Reference Laboratory – international integration

- Twinning project between Russian NRL and IZSVe (Istituto Zooprofilattico delle Venezie, Italy)
- International Ring Trials for Avian Influenza virus & antibody detection (VLA-Weybridge, UK; IZSVe, Italy). Proficiency tests on serology and PCR have been performed in 2007-2009 with satisfactory results
- Annual EU NRLs meetings
- Integration to Flu lab net, GISAID, OFFLU
- International FAO/IAEA training course for AI diagnostics, ARRIAH, September 2008
- AI monitoring programs in wild birds in RF– a project aimed at sampling in Wrangel Island and joint research in collaboration with US scientists realized in 2008

Avian Influenza related activities of Russian NRL in 2005-2009

4000+ samples submitted to ARRIAH from different regions of Russia and CIS in cases HPAI suspected (poultry, wild & domestic birds) and for monitoring

622 - 2005

1014 - 2006

841 - 2007

1598 - 2008

257 - 2009

- 170 A/H5N1 isolates recovered
- 130 A/H5N1 isolates partially sequenced and phylogenetically compared with isolates from Europe, Asia and Africa deposited in public databases
- The whole genomes of 5 A/H5N1 isolates were sequenced and phylogenetically compared

Diagnosis in domestic & wild birds in 2008 (NRL)

- In total 1570 samples obtained from wild birds (60 species) and 28 samples from poultry have been tested
- Avian Influenza type A virus genome detected in **15** samples:
 - 14 – wild birds, 1 - poultry
- Avian Influenza subtype H5 detected in **9** samples from domestic & wild birds
- **H5N1** virus was detected in **2** samples: **1** sample from rook (submitted in the end of 2007) and in **1** sample from chicken
- **HPAI H5N1 isolation – 1 from chicken**
(A/chicken/Primorsky/0085/2008)

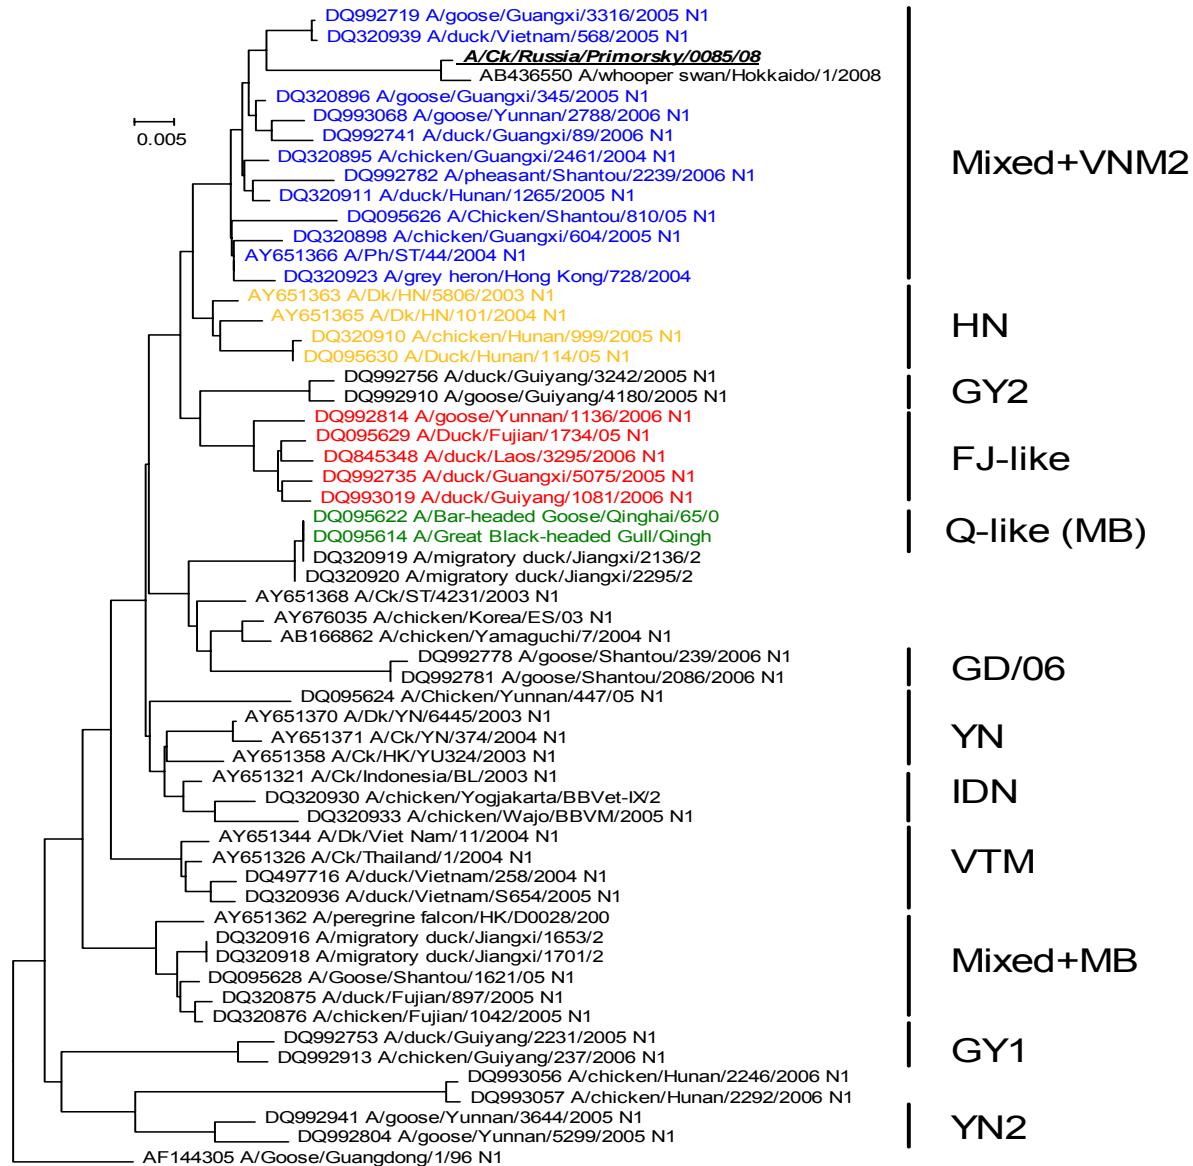

No detection of HPAI H5N1 in wild birds in 2008

HPAI virus 2008

- A/chicken/Primorsky/0085/2008 isolate belonged to the Asian genetic line of HPAI (A/Guandong/1/96 lineage) but differed from avian influenza virus isolates, recovered in the territory of the Russian Federation in 2005–2007
- Dendrograms constructed using NJ method according to identified genome fragments of A/Russia/Primorsky/0085/08 isolate and a number of Qinghai sublineage sequences, demonstrated their differences
- HA-gene - similarity to sublineage Mixed/VNM2
- Other genes – similarity to FJ-like group of isolates including those caused disease in humans (A/Shenzhen/406H/2006, A/human/China/GD02/2006)
- This strain was identical to HPAI virus caused mortality in wild birds in Japan in April 2008 (A/whooper swan/Hokkaido/1/2008 (H5N1) и A/whooper swan/Hokkaido/2/2008 (H5N1), similarity >99%

HA -gene tree constructed on sequences of fragments 77-1072 , NJ method

Colored red - FJ-like, blue -Mixed+VNM2, yellow –HN, green - QH-like

Diagnosis in wild birds in 2009 (NRL)

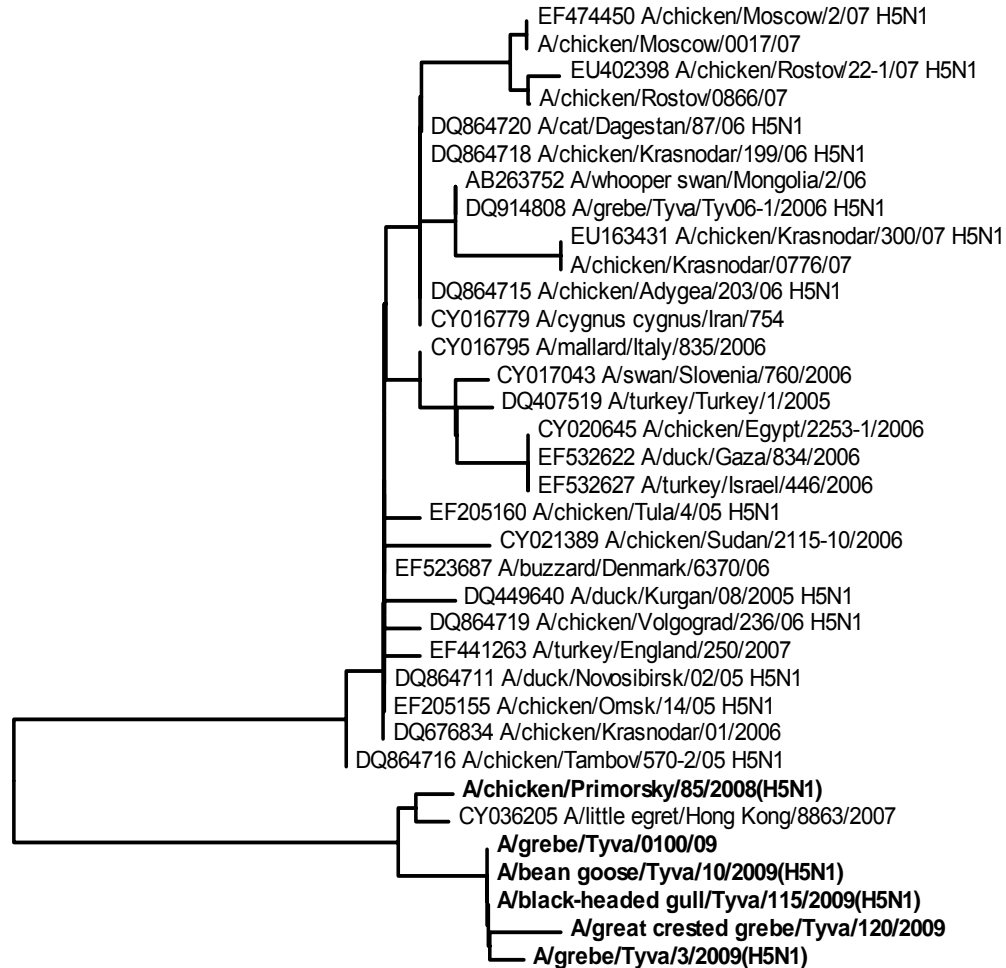

- In total 257 samples tested in January-August 2009:
- 244 - from wild birds
- 13 - from poultry
- Avian Influenza type A virus genome detected in **20/24** samples from wild birds delivered from Ubsu-Noor lake, Republic of Tyva:
 - H5N1** virus was detected in all **20** samples
 - HPAI H5N1** isolation – **9/10** from **Great crested grebe**
 - 1/1** from **Bean Goose**
 - 1/2** from **Black headed gull**

A new H5N1 introduction to Russia

June 2009

HA- gene tree of HPAI virus isolate A/grebe/Tyva/0100/09

0.005

Thank you for your attention!
